

FINE-TUNED AND SIMPLE

- Adjust the height-of-cut from a single location rather than at all four corners or having to adjust the front and back tires separately. Refine your height settings with adjustments from 1.5" to 5" in .25" increments.

OFFSET BLADE SETUP

SIMPLIFIED DECK DRIVE SYSTEM

- An offset blade design is less complex and easier to maintain than traditional timed deck setups. This more robust system results in potential belt replacement taking less than half the amount of time to repair/replace compared to timed deck systems. Image shown with bagging baffle.

SCAG LEVEL QUALITY-OF-CUT

UNMATCHED PERFORMANCE

- The large cutting chamber helps process more grass while being able to eat through wet and lush spring time grasses more efficiently. Cutter deck discharge opening is oversized for its class.

OPERATOR CONTROL PANEL

ERGONOMIC CONTROLS

- Angles of operator station controls match the natural angles of your outstretched hands. All controls are within easy reach: blade brake engagement, drive engagement, recoil start, throttle/choke, hour meter and park brake.

OVERSIZED ADJUSTABLE CONTROLS

MOW WITH EASE

ACHIEVE MAXIMUM COMFORT

- Oversized handles feature internally routed cables to protect from potential snags. Handle features tool-free
