Product Description

PEACE OF MIND The Professional Series is equipped with drive guard shear protection on each disc, as well as spring breakaway protection. This ensures minimal downtime and minimal repair costs should you contact any obstacles. **CUT IT OUT** Our Professional Series disc mowers utilize a shaft driven cutterbar comprised of individually segmented compact angular gear modules. This leads to even greater power transfer through the cutterbar, while still providing quiet, smooth-running operation. **WE CAN CONDITION** The MF DM255-P and MF DM306-P Professional Series disc mowers feature industry-exclusive conditioner compatibility that offer significant improvements in crop drydown, leading to a shorter harvest window and more valuable hay. **EASY ATTACHMENT** A conditioner can be easily removed and reinstalled as needed by the operator. **LIFETIME OIL** In order to maximize uptime and simplify the service process, our Professional Series disc mowers utilize a lifetime oil reservoir. You won't have to worry about hourly or yearly oil changes when operating in normal conditions.
